PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience building CI/CD pipelines, containerized deployments, and cloud infrastructure. Proven ability to improve system reliability and accelerate delivery cycles through automation, DevSecOps practices, and AI-augmented workflows. Strong focus on infrastructure security, performance budgeting, and operational excellence.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, C++, Python, SQL, HTML/CSS

Frameworks: React.js, Next.js 15, Node.js, Express.js, Redux Toolkit

CI/CD & DevOps: GitHub Actions, Docker, Jenkins, AWS (EC2, S3), Vercel, Shell Scripting

Security: Trivy, Dependabot, npm audit, ESLint

Core CS: Data Structures, Algorithms, OOP, REST APIs, System Design

Leadership: Code Review, Agile/Scrum, Cross-functional Collaboration, Technical Documentation, Mentoring

EXPERIENCE

DevOps & Software Engineer

NSRY, SVP (Naval Ship Repair Yard)

Sep 2025 – Present

Sri Vijaya Puram, India

- Automated build and deployment workflows using Jenkins and Docker, reducing manual intervention and ensuring consistent environment parity across development and production systems.
- Architected and refactored core MERN modules for industrial resource management, improving backend responsiveness and data retrieval speed.
- Reduced production-level system errors by 30% by implementing a comprehensive automated testing suite using Jest and Cypress for mission-critical logic.
- Digitized legacy industrial workflows into scalable full-stack applications, ensuring high data integrity and operational reliability in a high-stakes environment.

Full-Stack Engineering Consultant

Independent / Freelance

Jan 2023 – Present

Remote

- Managed full-cycle SDLC for diverse clients, delivering production-ready platforms using Next.js 15, TypeScript, and AWS.
- Optimized database schemas and API orchestration, improving Lighthouse performance scores by 40% while maintaining backward compatibility for existing users.

PROJECTS

ScratchPad | React, TypeScript, Rough.js, Canvas API, Vite

(Live App | Code)

- Built a fully functional Excalidraw-inspired whiteboard application using React and Canvas API, implementing a custom geometric state model for drawing, resizing, panning, and undo/redo operations.
- Hardened the project with a production-grade DevSecOps pipeline using GitHub Actions, Docker, Lighthouse CI, and Dependabot — achieving zero high-severity vulnerabilities and enforced Core Web Vitals budgets on every deployment.

LaTeX Resume Pipeline | LaTeX, GitHub Actions, pdfTeX

(Code)

- Engineered an automated document compilation pipeline using GitHub Actions to build and publish versioned PDF resumes from LaTeX source on every commit, eliminating manual build steps.
- Maintained multiple role-specific resume variants under version control, ensuring consistent formatting and reproducible builds across all deployments.

Pathfinding Visualizer PWA | JavaScript, DSA, Docker, GitHub Actions, Trivy

(Live App | Code)

- Architected a multi-stage CI/CD pipeline with GitHub Actions featuring automated ESLint linting, Trivy container security scanning, and Vercel production deployments with strict branch protection rules.
- Containerized the application using a multi-stage Docker build on Node 22-Alpine, achieving minimal image footprint, and integrated Lighthouse CI to enforce Core Web Vitals performance budgets on every deployment.

EDUCATION

KL University

Bachelor of Computer Applications

Relevant Coursework: Data Structures, Algorithms, Operating Systems, Networking

Vijayawada, India

CGPA: 8.95
